

Developing with Webhooks

Lab Time: 60 minutes

Lab Folder: C:\Student\Modules\06_WebAPI\Lab

Lab Overview: In this module, you will execute a PowerShell script to create an Azure SQL database named **ProductsDB**. After that, you will extend an ASP.NET MVC application named **ProductManagerSQL** with an Entity Framework model and a strongly-typed controller class to read and write product data in the **ProductsDB** database.

Exercise 1: Program Webhooks Callbacks using an Azure Function App

Exercise 2: Implement the Webhooks Callback Protocol

Exercise 3: Register a Webhook on a SharePoint List

Exercise 4: Register a Webhook using the Microsoft Graph API
